Professional Summary

Software Engineer with deep expertise in multiple languages, AWS, and System Design, dedicated to building high-performance **microservices**. Successfully **architected solutions** that improved system latency and implemented **Generative AI** features.

Experience

SOFTWARE DEVELOPMENT ENGINEER

Dec 2024 – Feb 2026

Traveloka

Bangalore, Karnataka

- Independently Designed and implemented an **"LLM-based Route Translation service"** integrated into Hotel and Experience search banners. This feature dynamically recommends optimal flight routes, driving a **4% increase in Click-Through Rate (CTR)** for flight searches.
- Designed and implemented features for **"Nexus Service"**, a high-throughput middleware for **Elasticsearch**. Implemented critical search functionalities such as Aggregations, Boosting, and Disjunctive Filters. Designed a flexible **Factory-based architecture** that allowed for the seamless integration of 4 new downstream use cases, achieving a **3x reduction in latency** (160ms → 57ms) and scaling to **38k RPM**.
- Deeply customized **AWS OpenSearch** indices, creating specialized settings, mappings, and analyzers. Successfully engineered support for **Korean and Chinese languages**, balancing **tokenization** accuracy with performance for market expansion lead to an increase of 7% RPM. Implemented **filters** to enhance synonym matching and overall **search accuracy**.
- Defined the team's GitHub **branching strategies and release strategy**, including documentation protocols. **Built comprehensive Datadog dashboards and monitors** to enhance observability. Solely managed team **on-calls**, sales support, and critical new integrations involving **stakeholder communication**.

SOFTWARE DEVELOPMENT ENGINEER

Jan 2024 – Dec 2024

Anakin Skywalker(YC S21)

Bangalore, Karnataka

- Engineered the innovative **"Generic Compilation Service"** for data structure transformation, leveraging JSONPath configurations for format conversion and data sanitization. Optimized performance through caching for JSONPath configs and batch processing, significantly enhancing speed and efficiency. Managed data retrieval and storage in Amazon S3, processing **1TB/Hour** while ensuring high availability and reliability. This initiative led to a **30% reduction in development time** and a **20% decrease in deployment time**.
- Built a user-friendly **General Library (Anakin Commons)** that integrates a scalable SQS-based pipeline sub-module along with other essential features, resulting in a **30% reduction in development time** and a 10% decrease in human error, making it easily accessible for team members.
- Architected Scalable Data Extraction Pipelines:** Designed and implemented a robust extraction pipeline that handled over **200k product** information from two of the world's largest e-commerce platforms. The pipeline efficiently extracted product details, exchange offers, and bank offers, utilizing **AWS services**(ECS,SQS and Alarms) for scalable and reliable data processing.

Projects

IMAGE CAPTIONING USING LSTM AND CNN | *Python, Tensorflow, Pandas*

Feb 2023 - Apr 2023

- Collaborated on an innovative project at IIT Dharwad aimed at automating image caption generation.
- Employed a sophisticated approach utilizing a pre-trained CNN model, Xception, to extract intricate image features. Ensured accuracy assessment through the application of the BLEU metric. Utilized LSTM networks for caption preprocessing, incorporating advanced tokenization techniques and vocabulary creation.

Education

Indian Institute of Technology(IIT) Dharwad

Bachelor of Technology in Electrical Engineering

Dharwad, Karnataka

Current CGPA: 8.46

Technical Skills

Languages: Java (8/11/21), Python, Terraform, C++, JavaScript, React JS, SQL, Go

Developer Tools/Libraries: IntelliJ, DataDog, VS Code, Grafana, Pandas, Geopandas, JDX, HTTP Toolkit, JVM

Technologies/Frameworks: Elasticsearch, Spring, SpringBoot, FastAPI, Django, REST API, MongoDB, CI/CD, GitHub, Git-Action, Load Balancer (ELB), DynamoDB, SQS, ECS, EC2, S3, Lambda, VPC, CloudWatch, OpenAPI, Redis, Kafka, PostgreSQL, MySQL, Docker, Linux, TensorFlow, Keras, Pytorch.
